

2017

FRM[®] Study Guide

2017 Financial Risk Manager (FRM®) Exam Study Guide

The world's most highly respected designation for risk management professionals

TOPIC OUTLINE, READINGS, TEST WEIGHTINGS

The Study Guide sets forth primary topics and subtopics covered in the FRM Exam Part I and Part II. The topics were selected by the FRM Committee as essential for today's risk managers to master. The topics and their respective weightings are reviewed yearly to ensure the Exams are timely and relevant. The Study Guide also contains a full listing of all of the readings that are recommended as preparation for the FRM Exam Part I and Part II.

Key concepts appear as bullet points at the beginning of each section and are intended to help candidates identify the major themes and knowledge areas associated with that section

FRM EXAM APPROACH

The FRM Exams are practice-oriented. The questions are derived from a combination of theory, as set forth in the readings, and "real-world" work experience. Candidates are expected to understand risk management concepts and approaches, as well as the ways in which they would apply to a risk manager's day-to-day activities. It is rare that a risk manager will be faced with an issue that can immediately be slotted into one category. In the real world, a risk manager must be able to identify any number of risk-related issues and be able to deal with them effectively. As such, the Exams are comprehensive in nature, testing a candidate on a number of risk management concepts and approaches.

READINGS

Questions for the FRM Exams are related to and supported by the readings listed under each topic outline. These readings were selected by the FRM Committee to assist candidates in their review of the subjects covered by the Exams. It is strongly suggested that candidates review these readings in depth prior to sitting for each Exam. All of the readings listed in the FRM Study Guide are available through GARP. Further information can be found on the GARP website.

FRM EXAM PREP PROVIDERS

Some candidates may want to more formally review the materials with FRM Exam Preparation Providers (EPPs). A list of EPPs that have registered with GARP can be found on the GARP website. GARP does not endorse any EPP but merely lists them as a service to FRM candidates.

On the following pages, an asterisk after a reading title indicates that the reading is freely available on the GARP website.

Foundations of Risk Management

Part I Exam Weight | 20%

Topics and Readings

This area focuses on foundational concepts of risk management and how risk management can add value to an organization. The broad knowledge points covered in Foundations include the following:

- Basic risk types, measurement and management tools
- Creating value with risk management
- The role of risk management in corporate governance
- Enterprise Risk Management (ERM)
- Financial disasters and risk management failures
- The Capital Asset Pricing Model (CAPM)
- Risk-adjusted performance measurement
- Multifactor models
- Data aggregation and risk reporting
- Ethics and the GARP Code of Conduct

To cover these broad knowledge points, a set of curated readings are listed on the following page. While detailed learning objectives associated with these readings are presented in the 2017 FRM Learning Objectives document, a brief summary of how to relate these readings to the knowledge points follows.

Reading 1 contains three chapters with the first two giving a broad overview of risk, different risk types, and how risks can arise in an organization. The third chapter describes the role of corporate governance in risk management including the role of the board of directors and other areas of an organization. The concept of an organization's risk appetite and how this is translated into a risk appetite framework and communicated throughout an organization is presented as well. Reading 2 introduces Enterprise Risk Management (ERM), a common and important method for assessing and managing risk in an organizational context. Reading 3 focuses more specifically on risk taking by banks and how risk management can add or destroy value in these institutions.

As it is always important to learn from history, the next several readings (Readings 4, 5, and 6) describe various financial disasters from the past with a particular focus on the recent global financial crisis. Reading 7 gives a nuanced approach to interpreting financial failures and the role that risk management may, or may not, have played in them.

Reading 8 presents the capital asset pricing model (CAPM), one of the foundational developments in risk-adjusted pricing and valuation. This is followed by a discussion, in Reading 9, of several commonly used CAPM-related risk measures and their application to performance measurement. Reading 10 moves beyond CAPM and introduces factor models and how they can be used to model returns.

Data is the lifeblood of many large financial organizations and aggregating and reporting risk data has become increasingly important. Reading 11 addresses this important topic. To help ensure ethical standards are upheld in the risk management profession, Reading 12 contains GARP's Code of Conduct, a document that all FRMs are subject to.

Readings for Foundations of Risk Management

1. Michel Crouhy, Dan Galai, and Robert Mark, *The Essentials of Risk Management, 2nd Edition* (New York: McGraw-Hill, 2014).
 - Chapter 1. Risk Management: A Helicopter View (Including Appendix 1.1. Typology of Risk Exposures)
 - Chapter 2. Corporate Risk Management: A Primer
 - Chapter 4. Corporate Governance and Risk Management
2. James Lam, *Enterprise Risk Management: From Incentives to Controls, 2nd Edition* (Hoboken, NJ: John Wiley & Sons, 2014).
 - Chapter 4. What is ERM?
3. René Stulz, “Risk Management, Governance, Culture and Risk Taking in Banks,” FRBNY Economic Policy Review, (August 2016): 43-59.
4. Steve Allen, *Financial Risk Management: A Practitioner’s Guide to Managing Market and Credit Risk, 2nd Edition* (New York: John Wiley & Sons, 2013).
 - Chapter 4. Financial Disasters
5. Markus K. Brunnermeier, 2009. “Deciphering the Liquidity and Credit Crunch 2007–2008,” *Journal of Economic Perspectives* 23:1, 77–100.
6. Gary Gorton and Andrew Metrick, 2012. “Getting Up to Speed on the Financial Crisis: A One-Weekend-Reader’s Guide,” *Journal of Economic Literature* 50:1, 128–150.
7. René Stulz, “Risk Management Failures: What Are They and When Do They Happen?” Fisher College of Business Working Paper Series, October 2008.
8. Edwin J. Elton, Martin J. Gruber, Stephen J. Brown and William N. Goetzmann, *Modern Portfolio Theory and Investment Analysis, 9th Edition* (Hoboken, NJ: John Wiley & Sons, 2014).
 - Chapter 13. The Standard Capital Asset Pricing Model
9. Noel Amenc and Veronique Le Sourd, *Portfolio Theory and Performance Analysis* (West Sussex, England: John Wiley & Sons, 2003).
 - Chapter 4. Applying the CAPM to Performance Measurement: Single-Index Performance Measurement Indicators (Section 4.2 only)
10. Zvi Bodie, Alex Kane, and Alan J. Marcus, *Investments, 10th Edition* (New York: McGraw-Hill, 2013).
 - Chapter 10. Arbitrage Pricing Theory and Multifactor Models of Risk and Return
11. “Principles for Effective Data Aggregation and Risk Reporting,” (Basel Committee on Banking Supervision Publication, January 2013).
12. GARP Code of Conduct.*

*This reading is freely available on the GARP website.

Quantitative Analysis

Part I Exam Weight | 20%

Topics and Readings

This area tests a candidate's knowledge of basic probability and statistics, regression and time series analysis, and various quantitative techniques useful in risk management. The broad knowledge points covered in Quantitative Analysis include the following:

- Discrete and continuous probability distributions
- Estimating the parameters of distributions
- Population and sample statistics
- Bayesian analysis
- Statistical inference and hypothesis testing
- Estimating correlation and volatility using EWMA and GARCH models
- Volatility term structures
- Correlations and copulas
- Linear regression with single and multiple regressors
- Time series analysis and forecasting
- Simulation methods

To cover these broad knowledge points, a set of curated readings are listed on the following page. While detailed learning objectives associated with these readings are presented in the 2017 FRM Learning Objectives document, a brief summary of how to relate these readings to the knowledge points follows.

Reading 13 consists of five chapters. These chapters introduce basic, fundamental concepts related to probability, statistics, probability distributions, Bayesian analysis, hypothesis testing, and confidence intervals.

Regression analysis is an important statistical tool used to investigate relationships between variables. The first three chapters in Reading 14 give a general introduction to regression analysis. These chapters cover both single and multiple variable linear regression analysis. The fourth chapter presents methods for quantifying the estimation error associated with ordinary least squares regression and how to structure and evaluate tests of statistical hypotheses.

Time series data occur frequently in finance. The four chapters in Reading 15 describe methods for analyzing time series data in order to estimate statistics and extract other meaningful characteristics of the data. The first chapter focuses on modeling and forecasting trends. The second chapter focuses on modeling and forecasting seasonality. The last two chapters focus on modeling cycles.

The two chapters in Reading 16 introduce volatility, correlation and copulas and how to use the EWMA model and the GARCH (1,1) model to estimate future covariance and volatilities.

Simulation methods in finance are used to value and analyze complex financial instruments and portfolios. Reading 17 introduces simulation methods including Monte Carlo simulation and the use of the bootstrapping method. It also explains the advantages and disadvantages of the simulation approach to financial problem solving and the techniques to reduce Monte Carlo sampling error.

Readings for Quantitative Analysis

13. **Michael Miller, *Mathematics and Statistics for Financial Risk Management, 2nd Edition* (Hoboken, NJ: John Wiley & Sons, 2013).**
 - Chapter 2. Probabilities
 - Chapter 3. Basic Statistics
 - Chapter 4. Distributions
 - Chapter 6. Bayesian Analysis (Pages 113-124 only)
 - Chapter 7. Hypothesis Testing and Confidence Intervals

14. **James Stock and Mark Watson, *Introduction to Econometrics, Brief Edition* (Boston: Pearson, 2008).**
 - Chapter 4. Linear Regression with One Regressor
 - Chapter 5. Regression with a Single Regressor
 - Chapter 6. Linear Regression with Multiple Regressors
 - Chapter 7. Hypothesis Tests and Confidence Intervals in Multiple Regression

15. **Francis X. Diebold, *Elements of Forecasting, 4th Edition* (Mason, Ohio: Cengage Learning, 2006).**
 - Chapter 5. Modeling and Forecasting Trend
 - Chapter 6. Modeling and Forecasting Seasonality
 - Chapter 7. Characterizing Cycles
 - Chapter 8. Modeling Cycles: MA, AR, and ARMA Models

16. **John C. Hull, *Risk Management and Financial Institutions, 4th Edition* (Hoboken, NJ: John Wiley & Sons, 2015).**
 - Chapter 10. Volatility
 - Chapter 11. Correlations and Copulas

17. **Chris Brooks, *Introductory Econometrics for Finance, 3rd Edition* (Cambridge, UK: Cambridge University Press, 2014).**
 - Chapter 13. Simulation Methods (Note: EViews and other programming references are not required.)

Financial Markets and Products

Part I Exam Weight | 30%

Topics and Readings

This area tests your knowledge of financial products and the markets in which they trade, more specifically, the following knowledge areas:

- Structures and functions of financial institutions
- Structure and mechanics of OTC and exchange markets
- Structure, mechanics, and valuation of forwards, futures, swaps, and options
- Hedging with derivatives
- Interest rates and measures of interest rate sensitivity
- Foreign exchange risk
- Corporate bonds
- Mortgage-backed securities

To cover these broad knowledge points, a set of curated readings are listed beginning on the following page. While detailed learning objectives associated with these readings are presented in the 2017 FRM Learning Objectives document, a brief summary of how to relate these readings to the knowledge points follows.

Reading 18 has three chapters. The first chapter describes the structure of commercial and investment banking, the way banks are regulated, the nature of risks facing them, and the role of capital in providing cushion against losses. The second chapter explains the risks and regulation faced by insurance companies, their capital requirements and performance ratios, and the types and key characteristics of pension funds. The third chapter introduces mutual funds and hedge funds, examines their key differences, and describes various hedge fund strategies and performance measures.

Financial derivatives play a key role in risk management and their coverage is the basis of Reading 19, which has twelve chapters. Chapters 1 through 3 describe options, forwards, and futures and explain the mechanics of futures markets and the hedging strategies using futures. Chapters 4 through 6 describe interest rates and interest rate sensitivity, the determination of forward and futures prices, and the use of interest rate futures in hedging. The mechanics, types, and the pricing of swaps contracts and the application of swaps for hedging are described in chapter 7. The next four chapters explain the mechanics of options markets, and the hedging strategies involving options and exotic options. Reading 20 concludes the discussion on derivatives, defines basis risk, describes commodity forwards and futures, explains the role of carry markets, and describes the determination of the no-arbitrage values for commodity forwards and futures.

Reading 21 describes the structures and operations of central counterparties (CCPs). The exchange-traded and over-the-counter (OTC) markets are explained along with the types of risks faced by CCPs. Reading 22 describes foreign exchange risk and explains interest rate parity theorem, balance-sheet hedging, and the diversification benefits of multicurrency asset-liability positions.

The last two readings examine two important classes of fixed income securities. Reading 23 describes corporate bonds, their types and characteristics, and the distinctions between credit default risk and credit spread risk. Reading 24 defines mortgages, explains the securitization process for mortgage-backed securities, and describes prepayment modeling and the calculation of the various metrics for a typical mortgage pool.

Readings for Financial Markets and Products

18. **John C. Hull, *Risk Management and Financial Institutions, 4th Edition* (Hoboken, NJ: John Wiley & Sons, 2015).**
 - Chapter 2. Banks
 - Chapter 3. Insurance Companies and Pension Plans
 - Chapter 4. Mutual Funds and Hedge Funds

19. **John C. Hull, *Options, Futures, and Other Derivatives, 9th Edition* (New York: Pearson Prentice Hall, 2014).**
 - Chapter 1. Introduction
 - Chapter 2. Mechanics of Futures Markets
 - Chapter 3. Hedging Strategies Using Futures
 - Chapter 4. Interest Rates
 - Chapter 5. Determination of Forward and Futures Prices
 - Chapter 6. Interest Rate Futures
 - Chapter 7. Swaps
 - Chapter 10. Mechanics of Options Markets
 - Chapter 11. Properties of Stock Options
 - Chapter 12. Trading Strategies Involving Options
 - Chapter 26. Exotic Options

20. **Robert McDonald, *Derivatives Markets, 3rd Edition* (Boston: Addison-Wesley, 2013).**
 - Chapter 6. Commodity Forwards and Futures

21. **Jon Gregory, *Central Counterparties: Mandatory Clearing and Bilateral Margin Requirements for OTC Derivatives* (New York: John Wiley & Sons, 2014).**
 - Chapter 2. Exchanges, OTC Derivatives, DPCs and SPVs
 - Chapter 3. Basic Principles of Central Clearing
 - Chapter 14 (section 14.4 only). Risks Caused by CCPs: Risks Faced by CCPs

22. **Anthony Saunders and Marcia Millon Cornett, *Financial Institutions Management: A Risk Management Approach, 8th Edition* (New York: McGraw-Hill, 2014).**
 - Chapter 13. Foreign Exchange Risk

23. **Frank Fabozzi (editor), *The Handbook of Fixed Income Securities, 8th Edition* (New York: McGraw-Hill, 2012).**
 - Chapter 12. Corporate Bonds

24. **Bruce Tuckman, Angel Serrat, *Fixed Income Securities: Tools for Today's Markets, 3rd Edition* (New York: John Wiley & Sons, 2011).**
 - Chapter 20. Mortgages and Mortgage-Backed Securities

Valuation and Risk Models

Part I Exam Weight | 30%

Topics and Readings

This area will test a candidate's knowledge of valuation techniques and risk models. The broad knowledge points covered in Valuation and Risk Models include the following:

- Value-at-Risk (VaR)
- Expected shortfall (ES)
- Stress testing and scenario analysis
- Option valuation
- Fixed income valuation
- Hedging
- Country and sovereign risk models and management
- External and internal credit ratings
- Expected and unexpected losses
- Operational risk

To cover these broad knowledge points, a set of curated readings are listed on the following page. While detailed learning objectives associated with these readings are presented in the 2017 FRM Learning Objectives document, a brief summary of how to relate these readings to the knowledge points follows.

Reading 25 consists of two chapters that introduce value-at-risk (VaR) estimation approaches and applications. Reading 26 covers financial risk measures and examines measurement frameworks such as the mean-variance approach, VaR, and expected shortfall (ES).

The three chapters that comprise Reading 27 present the key elements of option pricing and option sensitivities. Option valuation using binomial trees and the Black-Scholes-Merton model is covered, along with the use of options for hedging and risk management.

The five chapters that form Reading 28 are devoted to valuing and understanding risk management for fixed income securities. The first three chapters cover the various tools of fixed income valuation while the last two chapters cover risk metrics and hedging.

Reading 29 explains the specific sources of country risk and the use of external ratings in assessing sovereign default risk. A description of credit ratings, both external and internal, is further developed in the next reading. Reading 30 presents a review of external and internal rating methodologies and an assessment of the strengths and weaknesses of the rating methodologies.

The next two readings foreshadow two very important exam topics covered in Part II. Reading 31 presents the basics of credit risk, specifically expected loss (EL) and unexpected loss (UL) for both an individual security and a portfolio. Reading 32 introduces various aspects of operational risk. Stress testing, its importance, applications, and practices are explained in Readings 33 and 34.

Readings for Valuation and Risk Models

25. Linda Allen, Jacob Boudoukh and Anthony Saunders, *Understanding Market, Credit and Operational Risk: The Value at Risk Approach* (New York: Wiley-Blackwell, 2004).
 - Chapter 2. Quantifying Volatility in VaR Models
 - Chapter 3. Putting VaR to Work
26. Kevin Dowd, *Measuring Market Risk, 2nd Edition* (West Sussex, England: John Wiley & Sons, 2005).
 - Chapter 2. Measures of Financial Risk
27. John C. Hull, *Options, Futures, and Other Derivatives, 9th Edition* (New York: Pearson, 2014).
 - Chapter 13. Binomial Trees
 - Chapter 15. The Black-Scholes-Merton Model
 - Chapter 19. Greek Letters
28. Bruce Tuckman, *Fixed Income Securities, 3rd Edition* (Hoboken, NJ: John Wiley & Sons, 2011).
 - Chapter 1. Prices, Discount Factors, and Arbitrage
 - Chapter 2. Spot, Forward and Par Rates
 - Chapter 3. Returns, Spreads and Yields
 - Chapter 4. One-Factor Risk Metrics and Hedges
 - Chapter 5. Multi-Factor Risk Metrics and Hedges
29. Aswath Damodaran, “Country Risk: Determinants, Measures and Implications - The 2015 Edition” (July 14, 2015). (Pages 1-45 only).
30. Arnaud de Servigny and Olivier Renault, *Measuring and Managing Credit Risk* (New York: McGraw-Hill, 2004).
 - Chapter 2. External and Internal Ratings
31. Gerhard Schroeck, *Risk Management and Value Creation in Financial Institutions* (New York: John Wiley & Sons, 2002).
 - Chapter 5. Capital Structure in Banks (Pages 170-186 only)
32. John C. Hull, *Risk Management and Financial Institutions, 4th Edition* (Hoboken, NJ: John Wiley & Sons, 2015).
 - Chapter 23. Operational Risk
33. *Stress Testing: Approaches, Methods, and Applications*, Edited by Akhtar Siddique and Iftekhar Hasan (London: Risk Books, 2013).
 - Chapter 1. Governance over Stress Testing
 - Chapter 2. Stress Testing and Other Risk Management Tools
34. “Principles for sound stress testing practices and supervision” (Basel Committee on Banking Supervision Publication, May 2009).

Market Risk Measurement and Management

Part II Exam Weight | 25%

Topics and Readings

This area focuses on market risk measurement and management techniques. The broad knowledge points covered in Market Risk Measurement and Management include the following:

- VaR and other risk measures
 - Parametric and non-parametric methods of estimation
 - VaR mapping
 - Backtesting VaR
 - Expected shortfall (ES) and other coherent risk measures
- Modeling dependence: correlations and copulas
- Term structure models of interest rates
- Discount rate selection
- Volatility: smiles and term structures

To cover these broad knowledge points, a set of curated readings are listed on the following page. While detailed learning objectives associated with these readings are presented in the 2017 FRM Learning Objectives document, a brief summary of how to relate these readings to the knowledge points follows.

The importance of developing an understanding of VaR and other common risk measures used to assess risk cannot be overstated. Reading 35 presents both parametric and non-parametric estimation techniques for VaR and ES. Backtesting as a form of model validation as support for the use of VaR and VaR mapping as a tool to address portfolio risk factors are presented in the two chapters of Reading 36. Reading 37 completes the risk measures coverage by showing the uses and applications of VaR and ES in a trading book context and also addresses some of the recent academic literature associated with market risk management.

Modern risk management requires an understanding of correlation risk. Reading 38 explains the basics of correlation risk and explores the empirical properties, models, and modeling approaches related to correlation risk. The first chapter covers the basics of correlation risk and how it is related to credit risk, market risk, systematic risk, and concentration risk. The second chapter includes how correlations behave in different economic states as well as mean reversion and autocorrelation. The third chapter demonstrates how to apply statistical correlation models. The last chapter explains the purpose and uses of copula functions.

The five chapters in Reading 39 all are associated with term structure models and their impact on hedging. Various regression hedges are explained in the first chapter. Term structure models that deal with drifts, mean reversion, negative short-term rates, and time dependent volatilities are all reviewed. Specific term structure models, such as the Ho-Lee, Vasicek, Cox-Ingersoll-Ross, and lognormal models are discussed in this reading.

The two chapters in Reading 40 cover very specific concepts related to derivative valuation: the use of OIS vs. LIBOR as a risk-free rate and the occurrence of volatility “smiles.”

Readings for Market Risk Measurement and Management

35. Kevin Dowd, *Measuring Market Risk, 2nd Edition* (West Sussex, England: John Wiley & Sons, 2005).
- Chapter 3. Estimating Market Risk Measures: An Introduction and Overview
 - Chapter 4. Non-parametric Approaches
36. Philippe Jorion, *Value-at-Risk: The New Benchmark for Managing Financial Risk, 3rd Edition* (New York: McGraw-Hill, 2007).
- Chapter 6. Backtesting VaR
 - Chapter 11. VaR Mapping
37. “Messages from the academic literature on risk measurement for the trading book,” Basel Committee on Banking Supervision, Working Paper No. 19, Jan 2011.
38. Gunter Meissner, *Correlation Risk Modeling and Management* (New York: John Wiley & Sons, 2014).
- Chapter 1. Some Correlation Basics: Properties, Motivation, Terminology
 - Chapter 2. Empirical Properties of Correlation: How Do Correlations Behave in the Real World?
 - Chapter 3. Statistical Correlation Models—Can We Apply Them to Finance?
 - Chapter 4. Financial Correlation Modeling—Bottom-Up Approaches (Sections 4.3.0 (intro), 4.3.1, and 4.3.2 only)
39. Bruce Tuckman, *Fixed Income Securities, 3rd Edition* (Hoboken, NJ: John Wiley & Sons, 2011).
- Chapter 6. Empirical Approaches to Risk Metrics and Hedging
 - Chapter 7. The Science of Term Structure Models
 - Chapter 8. The Evolution of Short Rates and the Shape of the Term Structure
 - Chapter 9. The Art of Term Structure Models: Drift
 - Chapter 10. The Art of Term Structure Models: Volatility and Distribution
40. John C. Hull, *Options, Futures, and Other Derivatives, 9th Edition* (New York: Pearson, 2014).
- Chapter 9. OIS Discounting, Credit Issues, and Funding Costs
 - Chapter 20. Volatility Smiles

Credit Risk Measurement and Management

Part II Exam Weight | 25%

Topics and Readings

This area focuses on a candidate's understanding of credit risk management, with some focus given to structured finance and credit products such as collateralized debt obligations and credit derivatives. The broad areas of knowledge covered in readings related to Credit Risk Management include the following:

- Credit analysis
- Default risk: Quantitative methodologies
- Expected and unexpected loss
- Credit VaR
- Counterparty risk
- Credit derivatives
- Structured finance and securitization

To cover these broad knowledge points, a set of curated readings are listed on the following page. While detailed learning objectives associated with these readings are presented in the 2017 FRM Learning Objectives document, a brief summary of how to relate these readings to the knowledge points follows.

Reading 41 includes two chapters that introduce the key themes of credit risk management. The first chapter discusses the components of credit risk, types of credit risk analysis, credit risk measurements, and factors that cause credit risk. The second chapter describes various credit analyst roles and research skills expected of a credit risk analyst. The role of ratings in supporting credit risk management and rating assignment methodologies are discussed in the two chapters of Reading 42. The first chapter explains drivers and classifications of credit risk and conditions necessary for value creation, subject to capital requirements. The second chapter describes the key features of a good rating system, relates ratings to the probability of default, and analyzes different approaches to predicting default. Reading 43 describes different approaches to credit risk modeling and assesses credit derivatives.

Reading 44 includes three chapters that cover portfolio and structured credit risk. The first chapter describes default intensity models, explains credit spread risk, and defines the relationship between a default probability and a hazard rate. The second chapter defines default correlation for credit portfolios and assesses the impact of correlation on credit VaR. The third chapter describes common types of structured products, the mechanics of a securitization, and explains how default sensitivities for tranches are measured.

Counterparty risk is covered in eight chapters that form Reading 45. The first three chapters identify ways of managing and mitigating counterparty risk and describe the effects of netting, compression, and collateral on credit exposure. The fourth chapter describes the role, structures, and operations of central counterparties (CCPs). This is followed by two chapters on the determination of credit exposure and the pricing of and exposure profiles for derivative contracts and two chapters covering the analysis of credit value adjustment (CVA) and the concept of wrong-way risk. Reading 46 describes stress tests on CVA and the calculation of debt value adjustment (DVA).

Reading 47 defines and compares the risk management and scoring models of retail and corporate credit risk. Reading 48 describes special purpose vehicles (SPVs) and explains performance analysis tools for securitized structures. Finally, Reading 49 examines the subprime mortgage credit securitization process in the US and explains the implications of credit ratings on subprime mortgage backed securities.

Readings for Credit Risk Measurement and Management

41. Jonathan Golin and Philippe Delhaise, *The Bank Credit Analysis Handbook, 2nd Edition* (Hoboken, NJ: John Wiley & Sons, 2013).
 - Chapter 1. The Credit Decision
 - Chapter 2. The Credit Analyst
42. Giacomo De Laurentis, Renato Maino, and Luca Molteni, *Developing, Validating and Using Internal Ratings* (West Sussex, UK: John Wiley & Sons, 2010).
 - Chapter 2. Classifications and Key Concepts of Credit Risk
 - Chapter 3. Ratings Assignment Methodologies
43. René Stulz, *Risk Management & Derivatives* (Florence, KY: Thomson South-Western, 2002).
 - Chapter 18. Credit Risks and Credit Derivatives
44. Allan Malz, *Financial Risk Management: Models, History, and Institutions* (Hoboken, NJ: John Wiley & Sons, 2011).
 - Chapter 7. Spread Risk and Default Intensity Models
 - Chapter 8. Portfolio Credit Risk (Sections 8.1, 8.2, 8.3 only)
 - Chapter 9. Structured Credit Risk
45. Jon Gregory, *Counterparty Credit Risk and Credit Value Adjustment: A Continuing Challenge for Global Financial Markets, 2nd Edition* (West Sussex, UK: John Wiley & Sons, 2012).
 - Chapter 3. Defining Counterparty Credit Risk
 - Chapter 4. Netting, Compression, Resets, and Termination Features
 - Chapter 5. Collateral
 - Chapter 7. Central Counterparties
 - Chapter 8. Credit Exposure
 - Chapter 10. Default Probability, Credit Spreads, and Credit Derivatives
 - Chapter 12. Credit Value Adjustment
 - Chapter 15. Wrong-Way Risk
46. *Stress Testing: Approaches, Methods, and Applications*, Edited by Akhtar Siddique and Iftexhar Hasan (London: Risk Books, 2013).
 - Chapter 4. The Evolution of Stress Testing Counterparty Exposures
47. Michel Crouhy, Dan Galai and Robert Mark, *The Essentials of Risk Management, 2nd Edition* (New York: McGraw-Hill, 2014).
 - Chapter 9. Credit Scoring and Retail Credit Risk Management
 - Chapter 12. The Credit Transfer Markets-and Their Implications
48. Moorad Choudhry, *Structured Credit Products: Credit Derivatives & Synthetic Securitization, 2nd Edition* (New York: John Wiley & Sons, 2010).
 - Chapter 12. An Introduction to Securitization
49. Adam Ashcraft and Til Schuermann, "Understanding the Securitization of Subprime Mortgage Credit," Federal Reserve Bank of New York Staff Reports, No. 318 (March 2008).

Operational and Integrated Risk Management

Part II Exam Weight | 25%

Topics and Readings

This area focuses on methods to measure and manage operational risk as well as methods to manage risk across an organization, including risk governance, stress testing, and regulatory compliance. The broad knowledge points covered in Operational and Integrated Risk Measurement and Management include the following:

- Principles for sound operational risk management
- Enterprise Risk Management (ERM) and enterprise-wide risk governance
- IT infrastructure and data quality
- Internal and external operational loss data
- Methods of determining operational risk capital
- Model risk and model validation
- Extreme value theory (EVT)
- Risk-adjusted return on capital (RAROC)
- Economic capital frameworks and capital planning
- Liquidity risk measurement and management
- Failure mechanics of dealer banks
- Stress testing banks
- Third-party outsourcing risk
- Regulation and the Basel Accords

To cover these broad knowledge points, a set of curated readings are listed beginning on the following page. While detailed learning objectives associated with these readings are presented in the 2017 FRM Learning Objectives, a brief summary of how to relate these readings to the knowledge points follows.

Readings 50 through 53 cover operational risk governance and ERM, including recommended principles to manage operational risk, governance principles for risk appetite frameworks, and data quality management. Readings 54 and 55 discuss methods of measuring and reporting operational losses and the use of internal and external operational loss data. The second chapter in Reading 55 as well as Reading 56 present methods of measuring operational risk capital recommended by the Basel Committee. (As there has recently been a major change proposed to this approach, both the old methods are presented in Reading 55 as well as the new proposal in Reading 56.)

Readings 57 and 58 present issues related to modeling extreme losses, identifying and mitigating model risk, and validating models. Reading 59 introduces capital planning and risk-adjusted return on capital, while readings 60 and 61 extend the discussion by presenting best practices in capital planning.

The important subject of liquidity risk is covered in Readings 62 through 64. This includes the use of repurchase agreements, liquidity adjustments to VaR, and methods to manage funding and transactions liquidity risk. Readings 65 and 66 present a discussion of how banks can prepare for and respond to periods of financial distress, including stress testing approaches. The section concludes with a discussion of regulatory guidelines and requirements, including guidelines for managing outsourcing risk in Reading 67 and an overview of the Basel regulations in Reading 68. For the interested candidate, the full Basel regulation documents are presented as optional readings.

Readings for Operational and Integrated Risk Management

50. "Principles for the Sound Management of Operational Risk," (Basel Committee on Banking Supervision Publication, June 2011).
51. Brian Nocco and René Stulz, "Enterprise Risk Management: Theory and Practice," *Journal of Applied Corporate Finance* 18, No. 4 (2006): 8–20.
52. "Observations on Developments in Risk Appetite Frameworks and IT Infrastructure," Senior Supervisors Group, December 2010.

 - Chapter 17. Fundamental Review of the Trading Book
This chapter references the December 2014 proposal for the Fundamental Review of the Trading Book. The final version is “Minimum capital requirements for market risk” and is listed below as Optional Regulatory Readings for Reference #74.

Optional Regulatory Readings for Reference

Candidates are expected to understand the objective and general structure of important international regulatory frameworks and general application of the various approaches for calculating minimum capital requirements, as described in the readings above. Candidates interested in the complete regulatory framework can review the following:

69. “Basel II: International Convergence of Capital Measurement and Capital Standards: A Revised Framework—Comprehensive Version,” (Basel Committee on Banking Supervision Publication, June 2006).*
70. “Basel III: A global regulatory framework for more resilient banks and banking systems—revised version,” (Basel Committee on Banking Supervision Publication, June 2011).*
71. “Basel III: The Liquidity Coverage Ratio and liquidity risk monitoring tools,” (Basel Committee on Banking Supervision Publication, January 2013).*
72. “Revisions to the Basel II market risk framework—updated as of 31 December 2010,” (Basel Committee on Banking Supervision Publication, February 2011).*
73. “Basel III: The net stable funding ratio.” (Basel Committee on Banking Supervision Publication, October 2014).*
74. “Minimum capital requirements for market risk” (Basel Committee on Banking Supervision Publication, January 2016).

Risk Management and Investment Management

Part II Exam Weight | 15%

Topics and Readings

This area focuses on investment management concepts of risk management techniques applied to the investment management process. The broad knowledge points covered in Investment Management and Risk Management include the following:

- Factor theory
- Portfolio construction
- Portfolio risk measures
- Risk budgeting
- Risk monitoring and performance measurement
- Portfolio-based performance analysis
- Hedge funds

To cover these broad knowledge points, a set of curated readings are listed beginning on the following page. While detailed learning objectives associated with these readings are presented in the 2017 FRM Learning Objectives document, a brief summary of how to relate these readings to the knowledge points follows.

Reading 75 introduces the factor theory of investing, in which asset and portfolio returns and risk premiums are explained by their exposure to specific factors. The first chapter describes the theory of factor risk by starting with the basic single-factor risk premium theory – the CAPM. The chapter then transitions into multifactor models. The second chapter explains factors that drive risk premiums and compares two types of factors: fundamental-based factors and investment-style factors. The third chapter explores how the sets of factors used to construct a benchmark can affect portfolio alpha. The final chapter focuses on challenges in measuring performance for illiquid assets, including potential biases in illiquid asset classes' risk-adjusted returns and ways to address illiquidity in performance reporting.

Reading 76 introduces ways to construct an optimal portfolio given investment constraints.

Value-at-Risk (VaR) is an important tool in portfolio management as it explicitly accounts for leverage and portfolio diversification and provides a single measure of portfolio risk. The first chapter of Reading 77 explains how managers can measure and manage portfolio VaR. The second chapter explains some benefits of using VaR in investment management and introduces the process of risk budgeting.

As risk capital is a scarce resource, controls should exist to ensure that risk capital is used in a manner consistent with the firm's risk budget. Reading 78 explains how managers can develop a risk plan, provides some tools for risk budgeting, and introduces some guidelines for monitoring portfolio risk.

Standardized measurements are helpful for investors in comparing the performance of asset managers. Reading 79 introduces various measures to evaluate the performance of portfolio managers.

Hedge funds are private investment vehicles not open to the general investing public. Reading 80 gives a general introduction to hedge fund styles and Reading 81 describes the process of performing due diligence on funds and fund managers as part of the investment process.

- Chapter 11. Performing Due Diligence on Specific Managers and Funds

Current Issues in Financial Markets

Part II Exam Weight | 10%

Topics and Readings

This area of the Exam will test a candidate's knowledge of the material covered by each paper. The broad knowledge points covered in Current Issues include the following:

- Bitcoin and virtual currencies
- Market and funding liquidity
- Algorithmic trading and fixed income market algorithmic trading
- Negative policy rates
- Emerging economies and corporate debt

To cover these broad knowledge points, a set of curated readings are listed beginning on the following page. While detailed learning objectives associated with these readings are presented in the 2017 FRM Learning Objectives document, a brief summary of how to relate these readings to the knowledge points follows.

Reading 82 presents an overview of the past, present, and future uses of Bitcoin and how it facilitates the use of virtual currency. Risks associated with Bitcoin, including market risk, counterparty risk, operational risk, and others are reviewed. The regulatory issues that arise from Bitcoin interactions with the financial system are addressed with proposed measures to regulate virtual currencies.

Reading 83 focuses on the connection between liquidity and financial stability, and distinguishes two types of liquidity, market and funding. The changing market and funding liquidity conditions are examined, as well as the factors driving their evolution. Market liquidity and its resilience in markets is further discussed in Reading 84. Recommendations to bolster the level of market liquidity are provided, and the effects that monetary policy has on market liquidity are considered.

Algorithmic trading is a common feature of the global market. Reading 85 focuses on risks associated with algorithmic trading and how these risks are monitored and controlled at large financial institutions. Questions that can be used by supervised firms to self-assess their control state and risk appetite are presented. Electronic trading is further discussed in Reading 86, with a focus on the electronification of fixed income markets and the implications that electronification has on market quality.

The introduction of negative policy rates after the recent financial crisis is discussed in Reading 87. The reading reviews the experience of four central banks in Europe that have had negative policy rates with a focus on the implementation of these rates and the risks associated with them.

Emerging economies are the focus of Reading 88, particularly the state of emerging economies accumulating significant debt since 2010. Three case studies are presented: external commercial borrowings in India; foreign currency lending to Turkish corporates; and corporate bond issuance in Latin America. The policy implications are also explored as part of the analysis.

Readings for Current Issues in Financial Markets
